

Picking up goods? How to operate the weighbridge

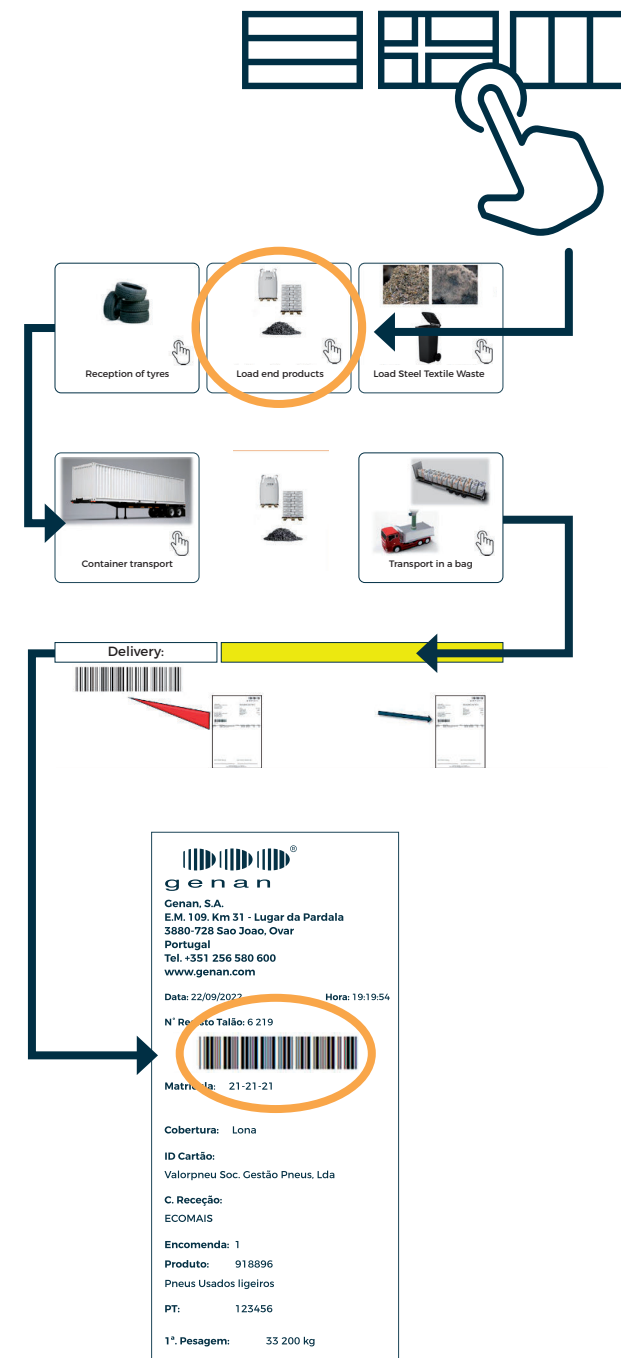

Weigh-in

1. Drive up to the terminal and select your preferred language on the screen. Then press the green button and choose the menu item **"Load end products"**, as shown in the illustration.
2. Select the type of transport:
 - Choose **"Transport in a bag"** if the goods are being collected in a trailer.
 - Choose **"Container transport"** if the goods are being collected in a container.
3. Enter the loading reference on the terminal and follow the on-screen instructions.
4. The system will print a weigh ticket. Bring this to the loading ramps.
5. **If you are collecting multiple loading references:** Leave the weighbridge completely and drive back on again. Then repeat the process for each new reference.
6. Once loading is completed, return to the weighbridge for final weighing.

Final weighing

1. Scan the barcode on the weigh ticket.
2. Proceed to the logistics office to collect the CMR waybills.

Goodbye and see you again soon!
